US-09-461-774-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2, Application US/09461774
Patent No. 6887481
GENERAL INFORMATION:
APPLICANT: CHAN, Lily
APPLICANT: CHUNG, Maxey Ching Ming
APPLICANT: LIM, Renee Lay Hong
TITLE OF INVENTION: Bacterial-derived molecules
TITLE OF INVENTION: diagnostic uses therefor
FILE REFERENCE: 1781-0180P
                                                                                                                                                                                                                                                                                                                                             Sequence 268, Application US/09071035 Patent No. 6448043
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

APPLICANT: WELDINGH, Karin

APPLICANT: PLORIO, Walter

ITITLE OF INVENTION: NUCLEIC ACIDS FRAGMENTS AND POLYPEPTIDE FRAGMENTS

TITLE OF INVENTION: DERIVED FROM M. TUBERCULOSIS

FILE REFERENCE: 670001-2002.1

CURRENT FILING DATE: 2001-02-20

PRIOR APPLICATION NUMBER: 03/050,739

PRIOR PILING DATE: 1998-03-30

PRIOR APPLICATION NUMBER: 0376/97

PRIOR APPLICATION NUMBER: 0376/97

PRIOR APPLICATION NUMBER: 1277/97

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New isolated mycobacteria polypeptides and nucleic acids - used developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis. for

Claim 1; Page 151-152; 163pp; English.

The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M. africanum or M. bovis

                                                                                                                                ঠ
                                                                                                                                                                                                                                                                                                         CC epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second CC different amino acid sequence from M. tuberculosis, and/or including a CC sequence which protects the first amino acid sequence from in vivo CC degradation or post-translational processing; (3) a nucleic acid fragment CC that encodes the above polypeptides. The polypeptides and nucleic acid care useful as pharmaceuticals, for diagnosis of and as antigens for CC vaccination against TB caused by Mycobacterium tuberculosis, africanum or CC previous sensitization in an animal with bacteria belonging or CC previous sensitization in an animal with bacteria belonging to the CC tuberculosis complex. The invention also describes the use of CFP7A or CC previous in a mammal; use of CFP7B, CFP19 or MPT59-ESAT6 or a T-cell epitope of for the induction of a strong inmune CC response in a mammal; use of CFP7B, CFP19 or MPT59-ESAT6 or a T-cell ceptiope of for diagnosis of TB in a mammal by performing a DTH type skin CC test; use of CFP27, CFP30A, CFP16, CFP19, CFP23, CFP23A, CFP30B, CFP7B or a T-cell epitope of for the preparation of an immunological composition; and CC for the preparation of a subunit vaccine

(I) is useful for preventing or treating the disease resulting from intracellular protozoan parasite infection such as malaria, tuberculosis, toxoplasmosis, trypanosomiasis, AIDS, cytomegalovirus infection, achlamydia disease, infections caused by Rickettsia, leishmaniasis, achlamydia disease, infections caused by Rickettsia, leishmaniasis, achlamydia disease, Trypanosoma infections, Chagas disease, Japan encephalitis, Herpes virus (alpha) infections, or severe acute. Poliomyclitis, Herpes virus (alpha) infections, or severe acute.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gene vaccine having nucleic acids encoding ubiquitin and antigen protein of intracellular parasite, useful for treating parasite infections such as malaria, tuberculosis, toxoplasmosis.
                                                                                                                                                                                                                                                                                                       Mycobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW18162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                        CC A vaccinating agent for promoting an immune response in a mammal against CC Mycobacterium pathogens comprises at least one majorly abundant CC extracellular protein, i.e. the M.tuberculosis 110, 80, 71, 58, 45, 32A, CC 32B, 30, 24, 23.5, 23, 16, 14 or 12 kD proteins, or their analogues, CC homologues and subunits. The present sequence represents the 24 kD corotein. The vaccinating agents are used to protect against (or to treat CC existing) infections by Mycobacterium (especially M. tuberculosis) while CC the epitopes can also be used to detect presence of an immune response to CC a Mycobacterium pathogen. The vectors, containing the DNA for the CC extracellular proteins, are used to transform cells for production of CC can be used in vaccines, e.g. against other bacteria, viruses, fungi and CC can be used in vaccines, e.g. against other bacteria, viruses, fungi and CC can be used in vaccines, e.g. against other bacteria, viruses, fungi and CC can be used in vaccines are assy to produced. They generate a response CC infection, regardless of the strength or specificity of the immune CC response. The vaccines are easy to produce and less toxic than known CC killed or attenuated vaccines, so can be given to immunocompromised CC subjects, e.g. those with HIV infection

                                                                                                                                                                                                                                                                                    This represents a Mycobacterium tuberculosis 30 kD protein. The invention CC provides an agent for vaccinating mammals against Mycobacterium. The CC agent comprises at least one of the major abundant extracellular 110, 80, CC 71, 58, 45, 32A, 32B, 30, 24, 23.5, 23, 16, 14 or 12 kD proteins of M. CC interleukin-12 (II-12) or MF59 as adjuvants. The agent containing the cut cut could encoding the extracellular products are used to raise a CC protective or therapeutic immune response against Mycobacterium, CC specifically M. tuberculosis. The immunodominant epitopes can also be CC used (typically in a cutaneous hypersensitivity test) to detect a immune cesponse to vaccination. Preparation of the agent does not require CC selection of the most immunogenic products, so large scale production and CC purification are easy, resulting in a consistent standardised CC formulation, having lower toxicity than killed or attenuated vaccines. CC The agents provide a rapid and effective response (including a strong CC cell-mediated component) and are safe even in immunocompromised subjects. They prevent development of an opsonising humoral response that might consistent in translated and intracellular pathogens

                                                                                                                                                             The invention relates to a novel nucleic acid encoding an abundant extracellular protein of Mycobacterium tuberculosis useful as vaccines for generating protective or therapeutic immune response against viral, bacterial, fungal and protozoal infections. They are also used as immunotherapeutic agents. The present sequence is M. tuberculosis strainmunotherapeutic agents. The present sequence is M. tuberculosis strainmunotherapeutic agents.

The present invention relates to a vaccinating agent for promoting an immune response in a mammalian host against an infectious Mycobacterium pathogen. The vaccinating agent comprises at least a portion or at least one immunodominant epitope of at least one majorly abundant extracellular product selected from M. tuberculosis 110, 80, 71, 58, 45, 32A, 32B, 30, 224, 23.5, 23, 16, 14 or 12 XD protein and their analogs, homologs, and subunits, and an II-12 or MF 59 adjuvant. The compositions of the present

New vaccinating agent i Mycobacterium pathogen extracellular products

for promoting an immune response against and HIV infection using majorly abundant from Mycobacterium tuberculosis.

The invention furelates to: a kit for early detection of M. tuberculosis disease; are antigenic composition for early detection of the M. tuberculosis discor infection. The compositions of the invention have antibacterial activity. The method is useful for early detection of mycobacterial disease or infection in a subject and for preparing a vaccine against tuberculosis infection. This sequence represents a Mycobacterium tuberculosis MPT 51 protein of the invention.
